

AUTOMATION & OPERATION

Valve actuation is crucial to fulfil any need in Oil and Gas facilities.

GWC Italia offers complete packages of valves developed with gears and actuators: we combine the top-quality of our valves with the most suitable operators to deliver excellent customized solutions.

Our team of Experts are highly experienced and available to work closely with you to identify the best technical solutions and meet any demand for **MOV, SDV, ESDV, HIPPS**: thanks to a global but lean supply chain, which include the sharing of information and technology, our Engineers select the most appropriate models, which are the closest to the Clients' specifications.

The complete packages are assembled and tested in our **Valve Automation Centres** and delivered with the relevant documentation

Actuators

Main standard and customized actuation solutions available:

Electric, Pneumatic, Hydraulic, Electro-Hydraulic, Gas Over Oil; Linear, Quarter-Turn and Multi-Turn.

Gearboxes

GWC Italia can offer its valves with a wide range of innovative **gear units**, such as **quarter-turn, double-speed, subsea** gears.

ROV Operators

Packages with the most suitable **operators for Remotely Operated Vehicle (ROV)**, a tethered underwater mobile device, usually operating a subsea torque tool on a valve on the subsea structure.
